What It Is

The Bison Model 1900 Shallow Well Hand Pump is a suction lift pump for static water levels less than 25 vertical feet and it can even run horizontally for up to 300 feet from the water source.

Why Us?

Our pumps are easy to install and has the capability to deliver up to 19oz. of well water per stroke. That's equivalent to pumping a gallon of water in less than 7 strokes.

Bison Pumps' gasket seal makes a watertight cover that protects well water from surface contamination. The threaded spout allows for a common garden hose connection. The pump can pressurize a water tank, making it possible to flush toilets, run water from sinks and take showers if the electricity goes out.

Mission Statement

- Bison Pumps provides people with the most valuable natural resource in the world: water. Bison Pumps manufactures the highest-quality pump, designed to last a lifetime. Because when you need it most, Bison Pumps put "The Power of Water in Your Hands."
